IT'S ALL ABOUT THE LOTION

UV LOTIONS

UV LOTIONS SHOULD BE USED BY ALL TANNERS BEFORE THEY GO ON A SUNBED.

These lotions are specifically designed and formulated for indoor use and add depleted moisture and vitamins that can be lost during the tanning process. In addition to these moisturising properties, lotions also contain different features which aid the tanning process in other ways. Throughout the catalogue you will see our symbol guide to help you identify these key characteristics; you can use it when ordering lotions, or alternatively you can ask a member of the team as we are fully trained on all the lines we carry.

THE SYMBOL KEY USES COLOUR CODED ICONS SO YOU CAN DETERMINE WHICH PRODUCT IS RIGHT FOR YOU AND YOUR CUSTOMERS.

The **GREEN CIRCLE** means that the lotion is a purely accelerating lotion, specifically formulated to condition the skin and add moisture. This symbol confirms that the product has no tingle or bronzing properties.

The **BLUE CIRCLE** states that the lotion contains a cooling feature so your skin feels cool as you tan.

The **ORANGE CIRCLE** denotes a bronzing product, and there are three main types of bronzer which could be used - DHA bronzers, cosmetic/instant bronzers and natural bronzers.

The **RED CIRCLE** indicates that the product includes a tingle factor,* which helps to stimulate rapid circulation on the surface of the skin creating an extreme redness and warming/tingling sensation that enhances the appearance and intensity of the tan.

**We recommend testing a small area of the skin before using a tingle product, and these products should not be used by beginner tanners, on the face or those with sensitive skin.*

YOU'LL FIND THE SYMBOLS KEY BELOW AT THE TOP OF THE PAGES THROUGHOUT THIS CATALOGUE.

An electrical ballast (or 'choke') is a device intended to limit the amount of current in an electrical circuit. It is essential you have the correct ballasts in the bed for the tubes, as a bed with 160w ballasts and 200w tubes will only run at 160w.
